

## ***Haste's Emergency Generator Service***

**Haste's emergency and planned generator service is contracted by DNO's across the UK.**

**The service is unique in that Haste engineers with MOCOPA competency are able to connect direct to the customer's installation, thus offering a simple and rapid solution to power outage incidents.**

In line with all of Haste's activity, this service is very customer-care focused, and essentially provides our DNO clients with solutions to two problems.

Firstly, the service is an aid for reducing "customer minutes lost". Secondly, the service can be used to help support vulnerable customers during planned or unplanned power outages.

Once deployed, Haste engineers install generators in compliance with MOCOPA procedures, ensuring complete isolation from the DNO network. We manage the risk. We manage the fuel. Finally we disconnect and restore mains power once the power fault is cleared.

Haste's generator fleet is mostly made up of 6.0kva gas powered generators that are able to provide customers with up to 20 Amps.... Enough to power lighting, boilers and one high-powered appliance at a time.

On high fault-volume days (e.g. storms) we supplement the fleet with 3.0kva generators that will power essential lighting and boiler circuits, as well as medical equipment.

Our fleet also includes a 67.0kva generator, adequate for most commercial property requirements.

If you would like further information regarding our electrical installation service, Incident management or any service offered by Haste find out more by contacting any of the team at [support@hasteltd.co.uk](mailto:support@hasteltd.co.uk) or call us on 01730 897100
